

Staging, Rollouts and Remote Hands

Fast, reliable deployment and onsite support for mission-critical infrastructure

Alliance SI delivers structured staging, rollout and Remote Hands services across data centres and multi-site environments nationwide. Equipment is prepared, tested and configured before it reaches site, reducing deployment risk and shortening installation time.

National capability, defined SLAs and certified technicians ensure consistent execution across every site. Alliance SI acts as a single accountable partner across staging, rollout and onsite support during critical deployment phases.

Staging & Provisioning

Prepared correctly. Delivered ready. Faster installations, fewer errors and reduced downstream operational risk.

- › Secure staging facilities located near major data centres
- › DOA checks, labelling, firmware updates and patching
- › Pre-deployment testing and quality assurance
- › Coordinated logistics and ready-to-install delivery

Rack & Stack Services

Clean installation. Controlled execution. Efficient deployments delivered with production-ready integrity.

- › Rack assembly and structured cable management
- › Equipment installation and provisioning
- › Firmware upgrades and network burn-in testing
- › Coordinated logistics for large-scale deployments

Device Rollout Management

Consistent execution at scale. Predictable rollouts with reduced transition risk and minimal disruption.

- › Program planning and logistics coordination
- › Site scheduling, documentation and reporting
- › Vendor and subcontractor management
- › Installation, testing and formal sign-off

Remote Hands & 24/7 Field Support

Onsite capability when and where it is required. Faster issue resolution and improved operational uptime.

- › Rack and stack, patching, power and diagnostics
- › Guided support for remote engineering teams
- › Break/fix response and scheduled maintenance
- › SLA-based national response coverage

Governance & Assurance

Alliance SI operates an ISO-certified Integrated Management System covering ISO 9001, 14001, 45001 and 27001, supporting consistent service delivery, regulatory compliance and enterprise risk management.

We also engage external cyber security specialists to assess alignment with the ASD Essential Eight, including structured gap analysis and prioritised remediation planning aligned with Australian Government guidance.

Proven Track Record
